

GreenSafe Asset Survey

Seventeen (17) departments responded to the survey (September, 2008)

Departments listed 3,101 computers, indicating that 618 of those are currently over 5 years old.

The average computer lifespan, as listed by the departments, is 5.2 years.

Responding departments are evenly split between those who plan for and replace computers on a 3-4 year cycle and those that expect a 6-7 year life for a computer.

Average replacement plan = 4.1 years

- Half of the departments have **less than** 1/3rd of their computers over 5 years old.
- These departments account for **75%** of computers in the survey.

Average replacement plan = 6.5 years

- Half of the departments have over 1/3rd of their computers **greater than** 5 years old.
 - *Five departments have 60-96% of their computers over 5 years old.*
- These departments account for **25%** of the computers in the survey

Only 20% of *all* existing computers are greater than 5 years old
